

SECRET/NOFORN - HANDLE VIA SKEET CHANNELS ONLY

Viewer 099 Session Report  
Date: 22 Sep 88  
Time: 1300 - 1410

Summary: Perceptions throughout the session of an upright (at times inclined or prone) object which is metallic, tall, cylindrically curved, somewhat hollow but dense, heavy, and smooth (AOIs - missile, tank round). There is an integral 'base' portion, part of which seems to extend outward from the object (AOIs - rocket motor, base of a column).

At some time shortly after this object becomes 'erect', people (who seem to be engineer/scientist/technician types) are discussing something having to do with an area near the top portion of the object. ~~There is a problem which invokes the concept of 'dead metal'; i.e., the object is rendered useless because of a design or engineering flaw (like an inconspicuous 'bump' on a tank round or engine piston) associated with the outside (top) surface. This flaw seems to have been detected during a test in which very bright light reflects off the surface of the object.~~

The irregularity cannot be corrected, which causes a great amount of angst--almost grief--amongst those associated with its creation.
